Forest Science

Volume 20, 1974

William E. Miller — *Editor*

H. R. Glascock, Jr. — *Associate Editor*

M. B. Dickerman — *Associate Editor*

Harry A. Fowells — *Staff Editor*

Nancy Hill — *Business Manager*

FOREST SCIENCE is published quarterly by the Society of American Foresters with the cooperation of forestry research and educational organizations.

The journal assumes no responsibility for the statements and opinions expressed by contributors. The editors cannot be responsible for loss or damage of manuscripts and accompanying matter.

Correspondence concerning manuscripts submitted for publication should be addressed to Dr. William E. Miller, U. S. North Central Forest Experiment Station, Folwell Ave., St. Paul, Minn. 55101.

Other correspondence, including subscriptions, remittances, reprint orders, proof, and inquiries concerning the status of manuscripts accepted for publication should be addressed to the Society of American Foresters, 1010 16th Street, N.W., Washington, D.C. 20036.

For all subscribers except members of the Society of American Foresters, subscription price, which includes any *Forest Science Monographs* issued during the year, is $10.00 per year postpaid to the U. S. and Canada, and $11.00 to other destinations for complete volumes. For Society members the respective prices are $6.00 and $7.00. A single number is $3.00 for *Forest Science* and $2.00 for a *Monograph*.

Missing issues covered by paid subscription will be replaced without charge if claim is made within 90 days after date of issue for addresses in the U. S. and Canada; elsewhere within 7 months. Otherwise payment of the single-issue price will be required.

The pages of FOREST SCIENCE are open to all qualified contributors. Preference will be given to papers dealing with (a) basic research, (b) research techniques and procedures, and (c) subjects fundamental to forestry such as forest soils, forest tree physiology, forest genetics, biometrics, theoretical forest economics, wood anatomy and chemistry, forest insects, and the diseases of forest trees. A charge of $35 per page to cover printing costs (but not editorial or distribution costs, or costs of reprints) will be made against the author or his agency.

Table of Contents, Volume 20

Number 1, March 1974

An analysis of methods for the selection of trees from wild stands ..... *F. Thomas Ledig* 2

Hydration of eastern hemlock as influenced by waxing and weather ..... *Neil C. Turner, Henry C. De Roo* 19

Effects of thinning on needle water potential in red pine ..... *Edward Sucoff, Sung Gak Hong* 25

Taxonomy of *Abies* in the southern Appalachians: variation in balsam monoterpenes and wood properties ..... *Eyvind Thor, Paul E. Barnett* 32

Anatomical characteristics of loblolly and slash pine cone stalks ..... *B. F. McLemore* 41

Development of ectomycorrhizae in a Douglas-fir nursery: I. seasonal characteristics ..... *W. A. Sinclair* 51

Development of ectomycorrhizae in a Douglas-fir nursery: II. influence of soil fumigation, fertilization, and cropping history ..... *W. A. Sinclair* 57

Vertical air temperature profiles in a pine stand: spatial variation and scaling problems ..... *James D. Bergen* 64

Which dependent variable in site index-height-age regressions? ..... *Robert O. Curtis, Donald J. De Mars, Francis R. Herman* 74

Comparison of three methods of estimating surface area and biomass for a forest of young eastern white pine ..... *Wayne T. Swank, Hans T. Schreuder* 91

Notes

Maturation of blue spruce cones ..... *Gilbert H. Fechner* 47

Needle variation in loblolly pine from mesic and xeric seed sources ..... *T. A. Knauf, M. V. Bilan* 88

Estimating relative water content of leaves without oven drying ..... *Geoffrey Pierpoint* 101

Reviews

Hillslope form and process. *Reviewed by Burchard H. Heede* 16

Predicting the success of alternative government incentive programs: a case analysis of small woodland owner behavior. *Reviewed by James E. Bethune* 18

Seed biology. *Reviewed by Te May Ching* 30

A monograph of the genus *Abies*. *Reviewed by Elbert L. Little, Jr.* 31

Organogenesis of flowers: a photographic text-atlas. *Reviewed by Christopher A. Tabor* 56

The life history of Douglas fir. *Reviewed by Christopher A. Tabor* 104

Notice

Increase in page charges for *Forest Science* 100

Number 2, June 1974

Multivariate estimators for sampling with partial replacement on two occasions ..... *C. M. Newton, T. Cunia, C. A. Bickford* 106

Design of successive forest inventories: optimization by convex mathematical programming ..... *John W. Hazard, Lawrence C. Promnitz* 117

Multi-stage line intersect sampling ..... *P. G. DeVries* 129

Cold hardiness of needles of *Pinus strobus* L. as a function of geographic source ..... *Dale M. Maronek, Harrison L. Flint* 135

Toward a biophysical evaluation of forest site potential .. *R. Lee, C. R. Sypolt* 145

Base-age invariant polymorphic site curves ..... *Robert L. Bailey, Jerome L. Clutter* 155

Elevation of seed sources and planting sites affects phenology and development of red oak seedlings ..... *C. E. McGee* 160

Conelet abortion and seed damage of shortleaf and loblolly pines by a seed-bug, *Leptoglossus corculus* ..... *G. L. DeBarr, B. H. Ebel* 165

An econometric model of softwood lumber and stumpage markets, 1947–1967 ..... *Vernon L. Robinson* 171

Transpiration of conifer seedlings in relation to soil water potential ..... *W. Lopushinsky, G. O. Klock* 181

Physiological importance of changes in endogenous hormones during red oak acorn stratification ..... *Albert R. Vogt* 187

Notes

Twins and triplets of American elm ..... *D. T. Lester, M. J. T. Lee* 142

Formulated site index curves for major timber species in Ontario .... *Bijan Payandeh* 143

Survival and water relations in loblolly pine seedlings after root immersion in alginate solution ..... *Ansel E. Miller, M. Reines* 192

Reviews

Plant responses to climatic factors. *Reviewed by Frank Ronco* 128

Plant physiology: A treatise. Vol. VIB, Physiology of development: The hormones. *Reviewed by Daniel C. Walton* 134

Shoot organization in vascular plants. *Reviewed by Herbert B. Tepper* 154

Ectomycorrhizae: Their ecology and physiology. *Reviewed by Hugh E. Wilcox* 179

List of manuscript reviewers, 1973 195

Number 3, September 1974

Toward an understanding of fire-scar formation: field observation and laboratory simulation ..... *A. Malcolm Gill* 198

Morphology of pinyon pine needles from fossil packrat middens in Arizona ..... *Ronald M. Lanner, Thomas R. Van Devender* 207

Natural hybridization of yellow birch and paper birch ..... *Burton V. Barnes, Bruce P. Dancik, Terry L. Sharik* 215

Juvenile: Mature correlations in slash pine ..... *A. E. Squillace, Charles R. Gansel* 225

Changes in a flatwood site following intensive preparation ..... *Robert P. Schultz, Lawrence P. Wilhite* 230

Maturation of acorns of cherrybark, water, and willow oaks .... *F. T. Bonner* 238

Forest products prices and national forest timber supply in the Douglas-fir region ..... *Darius M. Adams* 243

Red pine site index in Minnesota as related to soil and foliar nutrients ..... *David H. Alban* 261

Genetic variation among and within three loblolly pine stands in Georgia .... *Timothy La Farge* 272

Kinetic analysis of nitrogen influence on phosphate absorption by excised roots of Monterey pine seedlings .. *Henry G. Taber, William W. McFee* 279

Lead distribution in tree rings ..... *Gary L. Rolfe* 283

Notes

Conifer foliage mass related to sapwood area .. *Charles C. Grier, Richard H. Waring* 205

Bias in subsampling forest tree seed with a vibratory electronic seed counter ..... *Thomas D. Rudolph, Edmund O. Bauer* 221

Gamma densitometry of increment cores ..... *Frank W. Woods, William T. Lawhon* 269

Within-tree variation in mineral content of leaves of young balsam fir ..... *Ian K. Morrison* 276

Effects of 2,4-D herbicide on Siberian elm ..... *J. D. Otta* 287

Comments

Test of a model of forest succession. Comment by Jerold T. Hahn and Rolfe A. Leary on paper by H. H. Shugart, T. R. Crow, and J. M. Hett 212

Reply by H. H. Shugart, T. R. Crow, and J. M. Hett 213

Reviews

Plant physiology: A treatise, Vol. 6C. Physiology of development: From seeds to sexuality. Reviewed by John A. Romberger 214

Patterns and perspectives in environmental science. Reviewed by William D. Boyer 224

Plant function and structure. Reviewed by Gregory N. Brown 291

Fitting equations to data. Reviewed by James P. Barrett 292

Announcements

Review papers for *Forest Science* 211

Computer programs for quantifying diameter distributions with the Weibull function 229

Availability of a computer model for simulating growth and reproduction of forest stands of mixed species 259

International directory of woody-plant physiologists 260

Number 4, December 1974

The communal root system of red pine: growth of girdled trees ..... *E. L. Stone* 294

Height growth and site index for Douglas-fir in high-elevation forests of the Oregon-Washington Cascades ..... *Robert O. Curtis, Francis R. Herman, Donald J. DeMars* 307

Comparative growth and photosynthesis of black walnut and honeylocust seedlings ..... *Stanley B. Carpenter, James W. Hanover* 317

Litter production by red alder in western Washington ..... *S. P. Gessel, J. Turner* 325

Effects of wind and soil moisture on black walnut seedlings ..... *Randall Heiligmann, G. Schneider* 331

Effect of invasion by *Hypoxylon* and other microorganisms on carbohydrate reserves of oak-wilted trees ..... *F. H. Tainter, W. D. Gubler* 337

Applications of cluster analysis in natural resources research ..... *Brian J. Turner* 343

Eliminating biases in the planar intersect method for estimating volumes of small fuels ..... *James K. Brown, Peter J. Roussopoulos* 350

Statistical models and estimators of the proportion of volume by log position ..... *Donald W. Seegrist* 357

Tree seedling growth at different soil temperatures ..... *R. L. Heninger, D. P. White* 363

Notes

Canopy weight distribution affects windspeed and temperature in a lodgepole pine forest ..... *Howard L. Gary* 369

Survival, dry matter accumulation, and water use of loblolly pine seedlings treated with chemical antitranspirants ..... *D. C. McClurkin* 372

Rootstock does not affect cortical monoterpene composition in loblolly pine ..... *R. C. Schmidtling* 375

Differential frost tolerance of ponderosa and lodgepole pine megasporangiate strobili ..... *Frank C. Sorensen, Richard S. Miles* 377

Reviews

Forest tree breeding in the world. *Reviewed by Gene Namkoong* 305

Shedding of plant parts. *Reviewed by Claud L. Brown* 336

Temperature and life. *Reviewed by Henry Hellmers* 371

Key-Word Index 379

Author Index 384

Key-Word Index

Abies balsamea
Taxonomy of *Abies* in the southern Appalachians: variation in balsam monoterpenes and wood properties. **20:32**
Within-tree variation in mineral content of leaves of young balsam fir. **20:276**
Abies grandis
Transpiration of conifer seedlings in relation to soil water potential. **20:181**
Abies procera
Which dependent variable in site index-height-age regressions? **20:74**
Conifer foliage mass related to sapwood area. **20:205**
Acer saccharum
Estimating relative water content of leaves without oven drying. **20:101**
Lead distribution in tree rings. **20:283**
Ailanthus altissima
Tree seedling growth at different soil temperatures. **20:363**
air pollution
Lead distribution in tree rings. **20:283**
air temperature
Vertical air temperature profiles in a pine stand: spatial variation and scaling problems. **20:64**
Toward a biophysical evaluation of forest site potential. **20:145**
Canopy weight distribution affects windspeed and temperature in a lodgepole pine forest. **20:369**
alder, red (*see* ***Alnus rubra***)
Alnus rubra
Which dependent variable in site index-height-age regressions? **20:74**
Litter production by red alder in western Washington. **20:325**
anatomy
Anatomical characteristics of loblolly and slash pine cone stalks. **20:41**
aspen, quaking (*see* ***Populus tremuloides***)

beech, American (*see* ***Fagus grandifolia***)
Betula allaghaniensis
Natural hybridization of yellow birch and paper birch. **20:215**
Betula papyrifera
Formulated site index curves for major timber species in Ontario. **20:143**
Natural hybridization of yellow birch and paper birch. **20:215**
Tree seedling growth at different soil temperatures. **20:363**
biomass
Vertical air temperature profiles in a pine stand: spatial variation and scaling problems. **20:64**
Comparison of three methods of estimating surface area and biomass for a forest of young eastern white pine. **20:91**
Conifer foliage mass related to sapwood area. **20:205**
Effects of wind and soil moisture on black walnut seedlings. **20:331**
Litter production by red alder in western Washington. **20:325**
Tree seedling growth at different soil temperatures. **20:363**
Canopy weight distribution affects windspeed and temperature in a lodgepole pine forest. **20:369**
birch, yellow (*see* ***Betula allaghaniensis***)
birch, paper (*see* ***Betula papyrifera***)

Ceratocystis fagacearum
Effect of invasion by *Hypoxylon* and other micro-organisms on carbohydrate reserves of oak-wilted trees. **20:337**
cluster analysis
Applications of cluster analysis in natural resources research. **20:343**
cultural methods
Changes in a flatwood site following intensive preparation. **20:230**
cytogenetics
Twins and triplets of American elm. **20:142**

disease damage
Effect of invasion by *Hypoxylon* and other micro-organisms on carbohydrate reserves of oak-wilted trees. **20:337**
Douglas-fir (*see* ***Pseudotsuga menziesii***)
drought resistance
Needle variation in loblolly pine from mesic and xeric seed sources. **20:88**

econometric model
An econometric model of softwood lumber and stumpage markets, 1947–1967. **20:171**
Forest products prices and national forest timber supply in the Douglas-fir region. **20:243**
elm, American (*see* ***Ulmus americana***)
elm, Siberian (*see* ***Ulmus pumila***)

Fagus grandifolia
Estimating relative water content of leaves without oven drying. **20:101**
fir, balsam (*see* ***Abies balsamea***)
fir, grand (*see* ***Abies grandis***)
fir, noble (*see* ***Abies procera***)
fire behavior
Toward an understanding of fire-scar formation: field observation and laboratory simulation. **20:198**
fire effects
Toward an understanding of fire-scar formation: field observation and laboratory simulation. **20:198**
flowering and fruiting
Anatomical characteristics of loblolly and slash pine cone stalks. **20:41**
Maturation of blue spruce cones. **20:47**
Conelet abortion and seed damage of shortleaf and loblolly pines by a seedbug, *Leptoglossus corculus*. **20:165**
Maturation of acorns of cherrybark, water, and willow oaks. **20:238**
Differential frost tolerance of ponderosa and lodgepole pine megasporangiate strobili. **20:377**
foliar analysis
Red pine site index in Minnesota as related to soil and foliar nutrients. **20:261**

Within-tree variation in mineral content of young balsam fir. **20:276**

food reserves

Effect of invasion by *Hypoxylon* and other micro-organisms on carbohydrate reserves of oak-wilted trees. **20:337**

forest fuels

Eliminating biases in the planer intersect method for estimating volumes of small fuels. **20:350**

forest policy

Forest products prices and national forest timber supply in the Douglas-fir region. **20:243**

forest survey

Multivariate estimators for sampling with partial replacement on two occasions. **20:106**

Design of successive forest inventories: optimization by convex mathematical programing. **20:117**

Multi-stage line intersect sampling. **20:129**

Test of a model of forest succession. **20:212**

frost damage

Hydration of eastern hemlock as influenced by waxing and weather. **20:19**

Elevation of seed sources and planting sites affects phenology and development of red oak seedlings. **20:160**

frost hardiness

Cold hardiness of needles of *Pinus strobus* L. as a function of geographic source. **20:135**

Differential frost tolerance of ponderosa and lodgepole pine megasporangiate strobili. **20:377**

genetic variation

An analysis of methods for the selection of trees from wild stands. **20:2**

Taxonomy of *Abies* in the southern Appalachians: variation in balsam monoterpenes and wood properties. **20:32**

Needle variation in loblolly pine from mesic and xeric seed sources. **20:88**

Cold hardiness of needles of *Pinus strobus* L. as a function of geographic source. **20:135**

Natural hybridization of yellow birch and paper birch. **20:215**

Genetic variation among and within three loblolly pine stands in Georgia. **20:272**

geographic variation

Cold hardiness of needles of *Pinus strobus* L. as a function of geographic source. **20:135**

Elevation of seed sources and planting sites affects phenology and development of red oak seedlings. **20:160**

Genetic variation among and within three loblolly pine stands in Georgia. **20:272**

Gleditsia triacanthos

Comparative growth and photosynthesis of black walnut and honeylocust seedlings. **20:317**

growth curves

Which dependent variable in site index-height-age regressions? **20:74**

growth regulators

Physiological importance of changes in endogenous hormones during red oak acorn stratification. **20:187**

height growth

Height growth and site index for Douglas-fir in high-elevation forests of the Oregon-Washington Cascades. **20:307**

hemlock, eastern (*see* ***Tsuga canadensis***)

herbicides

Effects of 2,4-D herbicide on Siberian elm. **20:287**

heritability

An analysis of methods for the selection of trees from wild stands. **20:2**

Rootstock does not affect cortical monoterpene composition in loblolly pine. **20:375**

honeylocust (*see* ***Gleditsia triacanthos***)

hybrids

Natural hybridization of yellow birch and paper birch. **20:215**

Hypoxylon atropunctatum

Effect of invasion by *Hypoxylon* and other micro-organisms on carbohydrate reserves of oak-wilted trees. **20:337**

Inocybe lacera

Development of ectomycorrhizae in a Douglas-fir nursery: I. seasonal characteristics. **20:51**

Development of ectomycorrhizae in a Douglas-fir nursery: II. influence of soil fumigation, fertilization, and cropping history. **20:57**

insect damage

Conelet abortion and seed damage of shortleaf and loblolly pines by a seedbug, *Leptoglossus corculus*. **20:165**

Juglans nigra

Comparative growth and photosynthesis of black walnut and honeylocust seedlings. **20:317**

Effects of wind and soil moisture on black walnut seedlings. **20:331**

Laccaria laccata

Development of ectomycorrhizae in a Douglas-fir nursery: I. seasonal characteristics. **20:51**

Development of ectomycorrhizae in a Douglas-fir nursery: II. influence of soil fumigation, fertilization, and cropping history. **20:57**

Leptoglossus corculus

Conelet abortion and seed damage of shortleaf and loblolly pines by a seedbug, *Leptoglossus corculus*. **20:165**

litter production

Litter production by red alder in western Washington. **20:325**

log volume

Statistical models and estimators of the proportion of volume by log position. **20:357**

lumber price

Forest products prices and national forest timber supply in the Douglas-fir region. **20:243**

maple, sugar (*see* ***Acer saccharum***)

markets

An econometric model of softwood lumber and stumpage markets, 1947–1967. **20:171**

Forest products prices and national forest timber supply in the Douglas-fir region. **20:243**

mathematical models

Design of successive forest inventories: optimization by convex mathematical programing. **20:117**

Base-age invariant polymorphic site curves. **20:155**

Test of a model of forest succession. **20:212**

Computer programs for quantifying diameter distributions with the Weibull function. **20:229**

Availability of a computer model for simulating growth and reproduction of forest stands of mixed species. **20:259**

Statistical models and estimators of the proportion of volume by log position. **20:357**

measurement techniques

Height growth and site index for Douglas-fir in high-elevation forests of the Oregon-Washington Cascades. **20:307**

Canopy weight distribution affects windspeed and temperature in a lodgepole pine forest. **20:369**

moisture stress (*see* **plant water stress**)

morphology

Needle variation in loblolly pine from mesic and xeric seed sources. **20:88**

Morphology of pinyon pine needles from fossil packrat middens in Arizona. **20:207**

mycorrhizae

Development of ectomycorrhizae in a Douglas-fir nursery: I. seasonal characteristics. **20:51**

Development of ectomycorrhizae in a Douglas-fir nursery: II. influence of soil fumigation, fertilization, and cropping history. **20:57**

nursery practice

Development of ectomycorrhizae in a Douglas-fir nursery: I. seasonal characteristics. **20:51**

Development of ectomycorrhizae in a Douglas-fir nursery: II. influence of soil fumigation, fertilization, and cropping history. **20:57**

nutrition, tree

Kinetic analysis of nitrogen influence on phosphate absorption by excised roots of Monterey pine seedlings. **20:279**

Litter production by red alder in western Washington. **20:325**

oak, cherry bark (*see* ***Quercus pagodaefolia***)
oak, northern red (*see* ***Quercus rubra***)
oak, water (*see* ***Quercus nigra***)
oak, willow (*see* ***Quercus phellos***)
oak wilt (*see* ***Ceratocystis fagacearum***)

phenology

Maturation of blue spruce cones. **20:47**

Elevation of seed sources and planting sites affects phenology and development of red oak seedlings. **20:160**

photosynthesis

Comparative growth and photosynthesis of black walnut and honeylocust seedlings. **20:317**

Picea engelmannii

Transpiration of conifer seedlings in relation to soil water potential. **20:181**

Picea glauca

Bias in subsampling forest tree seed with a vibratory electronic seed counter. **20:221**

Tree seedling growth at different soil temperatures. **20:363**

Picea mariana

Formulated site index curves for major timber species in Ontario. **20:143**

Picea pungens

Maturation of blue spruce cones. **20:47**

pine, eastern white (*see* ***Pinus strobus***)
pine, jack (*see* ***Pinus banksiana***)
pine, loblolly (*see* ***Pinus taeda***)
pine, lodgepole (*see* ***Pinus contorta***)
pine, Monterey (*see* ***Pinus radiata***)
pine, pitch (*see* ***Pinus rigida***)
pine, pond (*see* ***Pinus serotina***)
pine, ponderosa (*see* ***Pinus ponderosa***)
pine, red (*see* ***Pinus resinosa***)
pine, shortleaf (*see* ***Pinus echinata***)
pine, slash (*see* ***Pinus elliottii***)
pine, spruce (*see* ***Pinus glabra***)

Pinus banksiana

Formulated site index curves for major timber species in Ontario. **20:143**

Bias in subsampling forest tree seed with a vibratory electronic seed counter. **20:221**

Tree seedling growth at different soil temperatures. **20:363**

Pinus contorta

Vertical air temperature profiles in a pine stand: spatial variation and scaling problems. **20:64**

Transpiration of conifer seedlings in relation to soil water potential. **20:181**

Differential frost tolerance of ponderosa and lodgepole pine megasporangiate strobili. **20:377**

Canopy weight distribution affects windspeed and temperature in a lodgepole pine forest. **20:369**

Pinus echinata

Conelet abortion and seed damage of shortleaf and loblolly pines by a seedbug, *Leptoglossus corculus*. **20:165**

Rootstock does not affect cortical monoterpene composition in loblolly pine. **20:375**

Pinus elliottii

Anatomical characteristics of loblolly and slash pine cone stalks. **20:41**

Juvenile: mature correlations in slash pine. **20:225**

Changes in a flatwood site following intensive preparation. **20:230**

Rootstock does not affect cortical monoterpene composition in loblolly pine. **20:375**

Pinus glabra

Rootstock does not affect cortical monoterpene composition in loblolly pine. **20:375**

Pinus monophylla

Morphology of pinyon pine needles from fossil packrat middens in Arizona. **20:207**

Pinus ponderosa

Transpiration of conifer seedlings in relation to soil water potential. **20:181**

Conifer foliage mass related to sapwood area. **20:205**

Differential frost tolerance of ponderosa and lodgepole pine megasporangiate strobili. **20:377**

Pinus radiata

Base-age invariant polymorphic site curves. **20:155**

Kinetic analysis of nitrogen influence on phosphate absorption by excised roots of Monterey pine seedlings. **20:279**

Pinus resinosa

Effects of thinning on needle water potential in red pine. **20:25**

Estimating relative water content of leaves without oven drying. **20:101**

Formulated site index curves for major timber species in Ontario. **20:143**

Red pine site index in Minnesota as related to soil and foliar nutrients. **20:261**

The communal root system of red pine: growth of girdled trees. **20:294**

Pinus rigida

An analysis of methods for the selection of trees from wild stands. **20:2**

Pinus serotina
Rootstock does not affect cortical monoterpene composition in loblolly pine. **20:375**
Pinus strobus
Comparison of three methods of estimating surface area and biomass for a forest of young eastern white pine. **20:91**
Cold hardiness of needles of *Pinus strobus* L. as a function of geographic source. **20:135**
Formulated site index curves for major timber species in Ontario. **20:143**
Gamma densitometry of increment cores. **20:269**
Pinus taeda
Anatomical characteristics of loblolly and slash pine cone stalks. **20:41**
Needle variation in loblolly pine from mesic and xeric seed sources. **20:88**
Conelet abortion and seed damage of shortleaf and loblolly pines by a seedbug, *Leptoglossus corculus*. **20:165**
Survival and water relations in loblolly pine seedlings after root immersion in alginate solution. **20:192**
Genetic variation among and within three loblolly pine stands in Georgia. **20:272**
Lead distribution in tree rings. **20:283**
Rootstock does not affect cortical monoterpene composition in loblolly pine. **20:375**
Survival, dry matter accumulation, and water use of loblolly pine seedlings treated with chemical antitranspirants. **20:372**
Pinyon, singleleaf (*see* ***Pinus monophylla***)
plant chemistry
Kinetic analysis of nitrogen influence on phosphate absorption by excised roots of Monterey pine seedlings. **20:279**
plant succession
Changes in a flatwood site following intensive preparation. **20:230**
plant water stress,-deficit
Hydration of eastern hemlock as influenced by waxing and weather. **20:19**
Effects of thinning on needle water potential in red pine. **20:25**
Needle variation in loblolly pine from mesic and xeric seed sources. **20:88**
Transpiration of conifer seedlings in relation to soil water potential. **20:181**
Survival and water relations in loblolly pine seedlings after root immersion in alginate solution. **20:192**
planting methods
Survival and water relations in loblolly pine seedlings after root immersion in alginate solution. **20:192**
polyembryony
Twins and triplets of American elm. **20:142**
Populus tremuloides
Formulated site index curves for major timber species in Ontario. **20:143**
progeny testing
Juvenile: mature correlations in slash pine. **20:225**
Genetic variation among and within three loblolly pine stands in Georgia. **20:272**
provenance
Genetic variation among and within three loblolly pine stands in Georgia. **20:272**
Pseudotsuga menziesii
Development of ectomycorrhizae in a Douglas-fir nursery: I. seasonal characteristics. **20:51**
Development of ectomycorrhizae in a Douglas-fir nursery: II. influence of soil fumigation, fertilization, and cropping history. **20:57**
An econometric model of softwood lumber and stumpage markets, 1947–1967. **20:171**
Transpiration of conifer seedlings in relation to soil water potential. **20:181**
Conifer foliage mass related to sapwood area. **20:205**
Forest products prices and national forest timber supply in the Douglas-fir region. **20:243**
Height growth and site index for Douglas-fir in high-elevation forests of the Oregon-Washington Cascades. **20:307**
Tree seedling growth at different soil temperatures. **20:363**

Quercus falcata, var. ***pagodaefolia***
Maturation of acorns of cherrybark, water, and willow oaks. **20:238**
Quercus nigra
Maturation of acorns of cherrybark, water, and willow oaks. **20:238**
Quercus phellos
Maturation of acorns of cherrybark, water, and willow oaks. **20:238**
Quercus rubra
Estimating relative water content of leaves without oven drying. **20:101**
Elevation of seed sources and planting sites affects phenology and development of red oak seedlings. **20:160**
Physiological importance of changes in endogenous hormones during red oak acorn stratification. **20:187**
Lead distribution in tree rings. **20:283**

radiant energy
Vertical air temperature profiles in a pine stand: spatial variation and scaling problems. **20:64**
Toward a biophysical evaluation of forest site potential. **20:145**
research techniques
Vertical air temperature profiles in a pine stand: spatial variation and scaling problems. **20:64**
Comparison of three methods of estimating surface area and biomass for a forest of young eastern white pine. **20:91**
Estimating relative water content of leaves without oven drying. **20:101**
Gamma densitometry of increment cores. **20:269**
Lead distribution in tree rings. **20:283**
respiration
Comparative growth and photosynthesis of black walnut and honeylocust seedlings. **20:317**
root grafts
The communal root system of red pine: growth of girdled trees. **20:294**

sampling methods
Comparison of three methods of estimating surface area and biomass for a forest of young eastern white pine. **20:91**
Multivariate estimators for sampling with partial replacement on two occasions. **20:106**
Design of successive forest inventories: optimization by convex mathematical programing. **20:117**
Multi-stage line intersect sampling. **20:129**

Bias in subsampling forest tree seed with a vibratory electronic seed counter. **20:221**
Within-tree variation in mineral content of leaves of young balsam fir. **20:276**
Applications of cluster analysis in natural resources research. **20:343**
Eliminating biases in the planer intersect method for estimating volumes of small fuels. **20:350**
seed dormancy
Physiological importance of changes in endogenous hormones during red oak acorn stratification. **20:187**
seed germination
Maturation of blue spruce cones. **20:47**
Maturation of acorns of cherrybark, water, and willow oaks. **20:238**
seed physiology
Physiological importance of changes in endogenous hormones during red oak acorn stratification. **20:187**
Maturation of acorns of cherrybark, water, and willow oaks. **20:238**
seed source (*see* **provenance**)
seed testing
Bias in subsampling forest tree seed with a vibratory electronic seed counter. **20:221**
seedling development
Development of ectomycorrhizae in a Douglas-fir nursery: I. seasonal characteristics. **20:51**
Development of ectomycorrhizae in a Douglas-fir nursery: II. influence of soil fumigation, fertilization, and cropping history. **20:57**
Elevation of seed sources and planting sites affects phenology and development of red oak seedlings. **20:160**
Comparative growth and photosynthesis of black walnut and honeylocust seedlings. **20:317**
Effects of wind and soil moisture on black walnut seedlings. **20:331**
Tree seedling growth at different soil temperatures. **20:363**
Survival, dry matter accumulation, and water use of loblolly pine seedlings treated with chemical antitranspirants. **20:372**
selection
An analysis of methods for the selection of trees from wild stands. **20:2**
Juvenile: mature correlations in slash pine. **20:225**
Genetic variation among and within three loblolly pine stands in Georgia. **20:272**
shelter belts
Effects of 2,4-D herbicide on Siberian elm. **20:287**
site index
Which dependent variable in site index-height-age regressions? **20:74**
Formulated site index curves for major timber species in Ontario. **20:143**
Toward a biophysical evaluation of forest site potential. **20:145**
Base-age invariant polymorphic site curves. **20:155**
Red pine site index in Minnesota as related to soil and foliar nutrients. **20:261**
Height growth and site index for Douglas-fir in high-elevation forests of the Oregon-Washington Cascades. **20:307**
soil moisture
Effects of thinning on needle water potential in red pine. **20:25**
Toward a biophysical evaluation of forest site potential. **20:145**
Transpiration of conifer seedlings in relation to soil water potential. **20:181**
Effects of wind and soil moisture on black walnut seedlings. **20:331**
soil nutrients
Changes in a flatwood site following intensive preparation. **20:230**
Red pine site index in Minnesota as related to soil and foliar nutrients. **20:261**
soil temperature
Toward a biophysical evaluation of forest site potential. **20:145**
Tree seedling growth at different soil temperatures. **20:363**
spruce, black (*see* ***Picea mariana***)
spruce, blue (*see* ***Picea pungens***)
spruce, Engelmann (*see* ***Picea engelmannii***)
spruce, white (*see* ***Picea glauca***)
stand structure
Multivariate estimators for sampling with partial replacement on two occasions. **20:106**
Computer programs for quantifying diameter distributions with the Weibull function. **20:229**
supply and demand
An econometric model of softwood lumber and stumpage markets, 1947–1967. **20:171**

taxonomy
Taxonomy of *Abies* in the southern Appalachians: variation in balsam monoterpenes and wood properties. **20:32**
Morphology of pinyon pine needles from fossil packrat middens in Arizona. **20:207**
terpenes
Taxonomy of *Abies* in the southern Appalachians: variation in balsam monoterpenes and wood properties. **20:32**
Rootstock does not affect cortical monoterpene composition in loblolly pine. **20:375**
thinning
Effects of thinning on needle water potential in red pine. **20:25**
The communal root system of red pine: growth of girdled trees. **20:294**
transpiration
Hydration of eastern hemlock as influenced by waxing and weather. **20:19**
Effects of wind and soil moisture on black walnut seedlings. **20:331**
Canopy weight distribution affects windspeed and temperature in a lodgepole pine forest. **20:369**
Survival, dry matter accumulation, and water use of loblolly pine seedlings treated with chemical antitranspirants. **20:372**
tree breeding
Juvenile: mature correlations in slash pine. **20:225**
tree height
Which dependent variable in site index-height-age regressions? **20:74**
Base-age invariant polymorphic site curves. **20:155**
Tsuga canadensis
Hydration of eastern hemlock as influenced by waxing and weather. **20:19**
Ulmus americana
Twins and triplets of American elm. **20:142**

Ulmus pumila
Effects of 2,4-D herbicide on Siberian elm. **20: 287**

walnut, black (*see* ***Juglans nigra***)
weather effects
Hydration of eastern hemlock as influenced by waxing and weather. **20:19**
Cold hardiness of needles of *Pinus strobus* L. as a function of geographic source. **20:135**
Effects of wind and soil moisture on black walnut seedlings. **20:331**
Differential frost tolerance of ponderosa and lodgepole pine megasporangiate strobili. **20:377**
wildlife habitat
Changes in a flatwood site following intensive preparation. **20:230**

wind movement
Vertical air temperature profiles in a pine stand: spatial variation and scaling problems. **20:64**
Canopy weight distribution affects windspeed and temperature in a lodgepole pine forest. **20: 369**
wood properties
Taxonomy of *Abies* in the southern Appalachians: variation in balsam monoterpenes and wood properties. **20:32**
Gamma densitometry of increment cores. **20: 269**

yield tables
Height growth and site index for Douglas-fir in high-elevation forests of the Oregon-Washington Cascades. **20:307**
